21 - 22 JUNE 2021
PLATFORM: WEBEX

INTRODUCTION

Breast and thyroid pathology are common cases that have been increasing nowadays. Despite its commonality, their challenging morphology always put pathologists in a diagnostic dilemma.

This two-day update course is designed for pathologists at all levels, the junior trainee, senior and consultant as well as for medical officers in pathology and also for surgeons or trainees in breast and thyroid. The course is slanted towards practical diagnostic histopathology, clinical correlation and a comprehensive coverage of histopathology of breast and thyroid diseases with special emphasis on areas which pose diagnostic difficulties.

The first day of the course will be on breast update and case discussion and the second day will be on thyroid. In this special event, we are pleased to bring together all the experts in breast & endocrine pathology in Malaysia who are passionate in their diagnostic work and never tired of reporting referral cases. Together we have our dedicated breast & endocrine surgeon with us to give a valuable input for a better pathologic correlation.

WHO SHOULD ATTEND?

This seminar is suitable for Pathologists and trainees, lecturers and medical officers, also for surgeons and their trainees.

The seminar aims to:

- Introduce breast biopsy reporting classification according to guidelines of the Royal College of Pathologist
- acquire the ability to confidently reach a diagnosis in difficult and borderline cases
- enhance pathologists confidence by introducing various example of cases with diagnostic dilemma
- update on selected topic that require pathologist understanding such as papillary lesions, NIFT-P related tumours, etc.
